Comments

13

Here comment on your overall impressions of the course and the instructor. (You might include remarks on the instructor's preparation and the organization of the course, the availability of the instructor outside of class, whether the instructor realizes when students do not understand, the clarity of explanations, whether you found the course interesting, etc. But you do not need to limit your comments to these subjects.)

(Instructor Text/Memo)

Chenxi, Wu Instructor

- I think there needed to be more examples to explain each concept more clearly.
- He's a good instructor and genuinely cares for his students. His notes and lectures were extremely organized. I would suggest improving lecture delivery and blackboard use (using clearer chalk and erasing well before writing).
- Profesor Wu is very organized, very nice and respectful toward students, and makes the course content fun and interesting. I found the class to be challenging but thought that Professor Wu's teaching was excellent.
- I think the instructor sometimes goes too fast, so the concept may not be so clear to me. I think he can put all the proof into his lecture notes more specifically.
- More examples related to the exam/homework would have been nice. The entire class was proofs that ended up never being used again, so were completely useless to study. The effort to improve lectures with the form was beneficial, but ultimately lectures were too fast, and there wasn’t enough time given after asking if anyone had any questions for anyone to finish writing the notes and then ask a question.
- I really, really enjoyed Professor Wu's class. He is one of the most responsive professors I've ever had the privilege to learn under. I appreciated that he solicited and listened to class feedback, posted his (well-written) notes on Canvas, responded promptly to Piazza and emails, and generally made himself as accessible as possible. Sometimes the lectures were slightly disorganized -- we would have to change variables in a proof halfway through, and once or twice we started to prove a theorem before realizing we didn't know enough to do so yet -- but that is literally my only complaint about this class. It was very difficult but also very rewarding.
- Dr Wu is amazing, seriously. Undergraduates in the math department would be so lucky to have him. He is really understanding and helpful in a way most STEM professors aren't, and he clearly has undergraduate well-being in mind as he works through material. He cares about whether we are actually learning, which can feel rare.

Comments

13

Here comment on your overall impressions of the course and the instructor. (You might include remarks on the instructor's preparation and the organization of the course, the availability of the instructor outside of class, whether the instructor realizes when students do not understand, the clarity of explanations, whether you found the course interesting, etc. But you do not need to limit your comments to these subjects.)

(Instructor Text/Memo)

Chenxi, Wu Instructor

- His lecture organization is very poor. He asks for feedback on his teaching a lot, but it is challenging to know what we need to know and how in depth we need to know the content. He gives little feedback on homework and the answer keys don't explain the problems so it's challenging to know where you went wrong.
- The instructor goes very fast but it makes sense given how much content we need to cover. I wish there would be more review of some of the definitions throughout the course if they tie into new ones as a refresher. The instructor is very available outside of class and makes an effort to help students whenever he can.
- Professor Wu was always incredibly prepared for lecture. He would create detailed outlines of what we did in the previous lecture, prepare very detailed lecture notes ahead of time so students could pre-review and study from them, and provide ample numbers of examples. Professor Wu also regularly gathered student feedback to ensure lecture pacing and problem set difficulties were appropriate. I found the course very interesting thanks to his fabulous teaching and hope to be able to take another course with Professor Wu in the future.
- Professor Wu was great. His lectures were very useful, he clearly cared a lot about the students because he constantly asked for feedback, and was very available for students.
- It is clear that Professor Wu cares about his students and he constantly seeks feedback on what he can do better. He was readily available outside of class. However, he is difficult to understand. He did not convey the material very well. He never explains the why, or motivation behind material, which is especially important in an abstract course like this. Chenxi also exclusively used the chalkboard, which while legible, did not always provide the clearest, or most concise way to give definitions, theorems etc. Overall, Professor Wu is the worst professor I've had in the math department so far.
- This course is very useful and the professor is very good.

- Professor Wu is a great professor. He genuinely cares about students, always asks our advice, and takes it to class. He prepares well with clear notes, including every topic he taught in class, and extra detailed examples with thorough explanations, which helps us understand challenging definitions more easily. Also, he organizes the courses decently and is adaptable in adjusting his teaching speed to ensure that everyone can keep pace with the material. Outside the class, he is patient to answer any math-related questions I ask during his office hours, and sometimes, he extends his office hours to help us learn more. Thanks to Professor Wu's effective teaching and valid knowledge base, I learned a lot and found modern algebra interesting, and I gained a strong interest in exploring these related topics further in the future.
- I really enjoyed the material. Professor Wu did a good job with his lectures. He was always eager to get suggestions on how he could be more effective. At times I think he was proceeding a little too quickly with the material, and he would ask the students from time to time if he was going too fast. However the students would never respond that he should slow down. However when he would ask a question while writing on the chalkboard, very few students seemed to have the answer. So I think there was a reluctance on the part of the students to ask questions for more clarification. I think he was trying his best to teach to the level of the class, but the students were not generally very cooperative in assisting him. I would look forward to taking more classes with Professor Wu, and am disappointed he is not teaching the followup class Math 542 for the second semester.
- Professor Wu is very organized and prepared for class. He is very good at offering examples to answer student questions, and the lecture notes posted on canvas were especially helpful for studying. He gave a lot of availability outside of class, and was accommodating to students whose schedules did not work with his office hours. It is very clear that he wants his students to succeed, and that he believes that they all can. Lectures could get a little bit confusing. Sometimes the premise of a question was not written on the board and only stated verbally(for example, the "givens" of a mathematical problem are written, but what we're trying to solve is not written), so it could be hard to follow along once the solution became more complicated. Professor Wu also took time before class, after class, and via announcements, and piazza to reach out to students to improve lecture organization, and implemented these suggestions throughout the semester. The workload was also manageable in general, and the homework was extremely helpful for illustrating concepts. After completing each assignment, I felt that I understood the definitions better, and felt like my skills in applying definitions and using mathematical rules to come up with explicit examples and computations were strengthened. Overall, I'm very glad to have taken this class with Professor Wu!

(Instructor Text/Memo)

Chenxi, Wu Instructor

- Chenxi is a great instructor that always look for feedback. He takes the feedback and improve the teaching during the course of the semester. I love the class
- I'm sure Chenxi is a very nice person, but I have never spent so much time and energy on a class only to walk out of it genuinely not understanding anything. I would read the book to try to prepare for the lectures, and then walk out of the lectures feeling like it was an effort in vain because the presentation was so confusing that I felt like I didn't actually understand anything that I read in the textbook or from the lecture. The organization and presentation of the material was very chaotic and all over the place, and the explanations were just completely over my head and extremely convoluted. I lost track of the number of panic attacks I started having from of this class because of how stupid I felt the entire time, to the point where I couldn't even bring myself to bother asking anymore questions on piazza or after class because I felt like I didn't even understand the very very basics of the course topics and the responses were always beyond my level of understanding. I wish we had been given realistic practice problems and homeworks that were just very basic, straightforward exercises from the book as opposed to these insanely difficult problems that seem to assume mastery of this topic in order to understand. I spent so much time on these problems and just didn't bother turning them in because I felt like I couldn't even figure out what I was doing wrong or not understanding despite reading the provided solutions. I think most of the topology group genuinely don't remember or understand what it is like to not already know everything in a given field.

Comments

13 Here comment on your overall impressions of the course and the instructor. (You might include remarks on the instructor's preparation and the organization of the course, the availability of the instructor outside of class, whether the instructor realizes when students do not understand, the clarity of explanations, whether you found the course interesting, etc. But you do not need to limit your comments to these subjects.)

(Instructor Text/Memo)

Chenxi, Wu Instructor

- He is a nice teacher! The teaching method is very good.
- Too smart.
- lecture is too fast

(Instructor Text/Memo)

Chenxi, Wu Instructor

- Patient and kind.
- Good guy, very caring and kind, and type up all the notes. He must be very familiar with the subject, even don't bring a note to the class
- Very useful course and kind teacher
- It is all good, except that maybe Chenxi could write a little bit better on the board.
- Chenxi was very helpful in office hours and gave assignments that helped my understanding. I appreciate all the extra preparation for the final exam
- Professor Wu is a very dedicated lecturer. He spontaneously prepared a whole series of review lecturers on Functional Analysis and measure theory when he realised that many students were lacking some background knowledge. He provided lots of material, like lecture notes.
- Great course!

(Instructor Text/Memo)

Chenxi, Wu Instructor

- I found that the course material and examples were quite interesting, and I especially liked how we revisited some concepts in linear algebra to contextualize them as special cases of more general definitions. The course was organized logically, and I never felt that we had skipped something or that I was missing something when approaching the homework.
- Very kind person.
